

Senior Scientist position at the Aging Basic Research Unit of the Molecular Oncology and Aging Research Group (Ref.-507061).

A full-time position is offered for a talented scientist with a strong background in genetics and immunology and an excellent track record of publications in molecular biology. At least five years of postdoctoral training is required. The successful candidate will be responsible for several research lines centered in the basic mechanisms involved in healthy/pathological human aging. A salary of 40K euros/year, including health insurance coverage, lab space and a start-up funding will be provided. The candidate is expected to apply for independent funding and to contribute with his/her own ideas to new research lines and proposals. The contract will be renewable annually and will have an initial duration of three years, with the possibility of extension. The candidate will join a young and enthusiastic research group with an excellent publication record in a splendid research environment provided by the Vall d'Hebron University Hospital Research Institute (<http://www.ir.vhebron.net>). For further information or applications please contact Dr Simó Schwartz Jr (sschwartz@ir.vhebron.net). Please specify job reference 507061 on the subject.
